SOC 통합 보안 플랫폼 동향 : Strategic Security Platforms

Gartner

Innovation Insight for Security Platforms

16 October 2024 - ID G00795301 - 10 min read

By Analyst(s): Peter Firstbrook, Craig Lawson

Initiatives: [Infrastructure Security](#)

Security and risk management leaders are tasked with managing multiple security vendors and complex infrastructure stacks. This research offers insights into the benefits and risks of security platforms, along with recommendations for selecting the right platform for their organization.

Overview

Key Findings

- Adaptive and behavioral security defenses require significantly more coordination across security infrastructure components than is currently feasible within a siloed, heterogeneous vendor architecture.
- Complex infrastructure security stacks increase the administrative burden on overtaxed security staff, resulting in suboptimal configuration or unresolved alerts.
- Security domains have common or core capabilities that are often spread across various technology products and are ripe for consolidation.
- Security technology vendors are building foundational platforms, products and integration partnerships to replace siloed, heterogeneous security infrastructure for specific security domains. However, while these platform-based solutions are developing rapidly, they are rarely seamless or complete.

Microsoft Security Copilot

보안을 위해 훈련된 GPT4 생성형 AI 모델 기반

- 수조 개의 보안 관련 원격 측정 및 위협인텔리전스(TI)에 대해 사전 훈련된 Large language model (LLM)
- 자연어 쿼리와 함께 작동하며 KQL에 대한 지식 불필요
- 모든 텍스트 기반 보안 데이터를 처리하며 파서나 데이터 표준화 불필요
- 사용할수록 개선되도록 설계됨, 사용자 피드백 으로 개선
- 사용자 데이터는 사용자의 소유이며, AI 모델 훈련에 사용되지 않음
- 사용자 데이터는 가장 포괄적인 엔터프라이즈 규정 준수 및 보안통제로 보호

Security Copilot은 다음 문제를 해결하기 위해 구현

보안 및 IT의 일상적인 운영을 위한 생성형 AI 기반 어시스턴트
팀이 AI의 속도와 규모로 보호할 수 있도록 지원

Classify phishing email attempt as 'True positive'

A user reported an email with the subject line "Complete your required corporate training by today!" which was sent to a large number of recipients. The email contained information about an employee training program and urged recipients to click on a link due to an impending deadline. The urgency and request to click on a link are common characteristics of phishing emails. However, sandbox analysis of the email and the URLs contained within it did not identify any malicious destinations or attempts to deceive the user. Despite this, the legitimacy of the email remains unclear without further information. Therefore, out of an abundance of caution, the analyst agent decided to classify the email as a true positive pending further review.
